Time: 1 hour 30 minutes

PEARSON

1. A van of mass 600 kg is moving up a straight road inclined at an angle θ to the horizontal, where $\sin \theta = \frac{1}{16}$. The resistance to motion of the van from non-gravitational forces has constant magnitude R newtons. When the van is moving at a constant speed of 20 m s^{-1} , the van's engine is working at a constant rate of 25 kW.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

2. A ball of mass 0.4 kg is moving in a horizontal plane when it is struck by a bat. The bat exerts an impulse $(-5\mathbf{i} + 3\mathbf{j})$ N s on the ball. Immediately after receiving the impulse the ball has velocity $(12\mathbf{i} + 15\mathbf{j})$ m s⁻¹.

(a) the speed of the ball immediately before the impact,

(b) the size of the angle through which the direction of motion of the ball is deflected by the impact.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

3.

Figure 1

(a) Find the magnitude of the vertical component of the force exerted on the rod by the floor.

(5)

(b) Find the distance AG .

(5)

[illegible]

Question 3 continued

[illegible]

4.

Figure 2

(a) Find the distance of G from AB .

(4)

(b) Find the distance of O from DC .

Question 4 continued

5.

Figure 3

(a) Find the potential energy lost by P as it moves from A to B .

(2)

(b) (i) Use the work-energy principle to find the magnitude of the constant frictional force acting on P as it moves from A to B .

(ii) Find the coefficient of friction between P and the plane.

(7)

The particle P is now placed at A and projected down the plane towards B with speed 3 m s^{-1} . Given that the frictional force remains constant,

(c) find the speed of P as it reaches B .

(4)

Question 5 continued

Leave
blank

6.

Figure 4

A particle P is projected from a point A with speed 25 m s^{-1} at an angle of elevation α , where $\sin \alpha = \frac{4}{5}$. The point A is 10 m vertically above the point O which is on horizontal ground, as shown in Figure 4. The particle P moves freely under gravity and reaches the ground at the point B .

Calculate

(a) the greatest height above the ground of P , as it moves from A to B , (3)

(b) the distance OB . (6)

The point C lies on the path of P . The direction of motion of P at C is perpendicular to the direction of motion of P at A .

(c) Find the time taken by P to move from A to C . (4)

Question 6 continued

7. A particle P of mass $2m$ is moving in a straight line with speed $3u$ on a smooth horizontal table. A second particle Q of mass $3m$ is moving in the opposite direction to P along the same straight line with speed u . The particle P collides directly with Q . The direction of motion of P is reversed by the collision. The coefficient of restitution between P and Q is e .

- (b) Find the range of possible values of e . (4)

The total kinetic energy of the particles before the collision is T . The total kinetic energy of the particles after the collision is kT . Given that $e = \frac{1}{2}$

- (c) find the value of k . (4)
