

Mark Scheme (Final)

January 2015

Pearson Edexcel IAL Economics (WEC04) Paper 01

Unit 4: Developments in the Global Economy

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

FOR ALL QUESTIONS: No mark scheme can cover all possible responses. Therefore, reward analysis which is relevant to the question even if this is not specifically identified in the mark scheme.

Question		Mark
Number		
1 (a)	 Understanding that this would reduce the demand for exports from the country, constraining aggregate demand 	
	 An increase in government spending could compensate for the decrease in aggregate demand caused by the worsening of the trade balance The effectiveness of this would be determined by the size of the multiplier, there may be a time lag (depending on what the government spent on), and the government spending would have an opportunity cost. If it was in the form of export subsidies, it may break agreements with trade blocs or the WTO. Additionally, it could worsen government finances (fiscal deficit and national debt) - these are already very high for many countries and so such a policy may be unacceptable - and/or be inflationary. The government could reduce tax rates: A reduction in income tax/VAT could lead to greater consumer spending in the country, allowing firms to sell to domestic consumers, rather than to international consumers. A reduction in corporation tax/tax breaks for R&D etc. could lead to higher levels of investment, raising firms' price and non-price competitiveness, helping them to sell more goods both domestically and abroad. Depending on consumers' YED for imports, they may respond to a tax cut by buying more imports, rather than domestically produced goods. Alternatively, depending on consumer confidence levels, they may save the money. Firms may not increase investment if their confidence levels are low, or if credit is difficult to obtain. The effect of a fall in price of goods would depend on consumers' PED for the goods The government could impose tariffs on imports, leading to a lower value of imports, maintaining the trade balance, and reducing the level of competition that firms face from foreign companies The effectiveness of this would depend on domestic consumers' PED for imports, domestic producers' PES, and the response of other countries, e.g. they may retaliate / lead to a trade war The government could use monet	
	 production costs, and lead to a weakening of the currency, making exports relatively cheaper, and imports relatively more expensive Alternatively exchange rate policy may be used - devaluation of the currency. This depends on consumer confidence, relative interest rates, domestic consumers' PED for imports and foreign consumers' PED 	
	for our export. It may also lead to competitive devaluations / currency wars. In some economies, the central bank controls monetary policy rather than the government.	

The government could use supply-side policies:

- Free market and/or interventionist measures could be used to increase the economy's productive capacity, lowering cost-push inflationary pressures, and increasing the price and non-price competitiveness of the country's goods and services
- Many of these policies are expensive, and are only effective with a significant time lag.

Also allow suggestions that the government should focus on increasing trade with its other partners to offset the loss of trade with the partner in recession (with appropriate evaluation).

(15)

Question Number		Mark
1 (b)	 Understanding of economic growth 	
	 Increased international trade leads to economic growth: Increased trade allows more specialisation according to comparative advantage, raising efficiency, and allowing both countries to reach points outside of their PPFs. This means more goods and services for their populace to consume (candidates may illustrate this diagrammatically or with a numerical example) If a country's exports increase by more than its imports, then aggregate demand may increase, leading to economic growth (candidates may use AS/AD diagram/analysis here) Larger economies of scale mean more efficient production, which may lead to an increase in LRAS Firms face more competition, giving them more incentive to produce efficiently, leading to an increase in LRAS A higher rate of technological diffusion, means that efficient production methods and innovative products are more widely available / used, meaning an increase in LRAS Increased trade may lead to increased rates of (inward) investment. May lead to increased availability of foreign currency. 	
	 Increased international trade does not lead to economic growth: If imports increase by more than exports, the country's trade balance will worsen, aggregate demand may fall, leading to constrained economic growth Increased specialisation according to comparative advantage reduces risk diversification, leading economies to be more vulnerable to external shocks, perhaps meaning lower rates of growth if a shock hits Infant industries may be out-competed, and particularly in terms of developing economies, this may prevent industrialisation taking place / creation of global monopolies, limiting future growth If developing countries are mainly exporting primary products, this may lead to a worsening of their terms of trade, hindering their growth and development More trade into developing countries may involve developed countries dumping goods on them, making it more difficult for domestic producers to become established and expand 	
	 General evaluative points could include: Consideration of the limitations of the model of comparative advantage Prioritisation of points The answer may be different for different countries, particularly developed and developing countries Effects on growth depend on the all other things being equal, the size of the multiplier, and the level of spare capacity in the economy Long run effects on growth may be greater than the short run effects 	(25)

Question Number		Mark
2 (a)	Candidates may be rewarded for argument that international institutions and NGOs have been successful, or that they have not, and use reverse arguments in evaluation.	
	 Understanding of a international institutions Understanding of NGOs Understanding of economic growth Understanding of developing countries 	
	 The World Bank - provides low-interest loans, interest-free credit and grants to developing countries for education, health, infrastructure etc. projects. Also offers debt relief. The IMF - promotes international monetary co-operation, exchange rate stability, and orderly exchange rate arrangements; to foster economic growth and high levels of employment; and to provide temporary financial assistance to countries to help ease balance of payments adjustment. Also offers debt relief. 	
	 The WTO - promotes the liberalisation of international trade, allowing developing countries to compete in international markets, and provides advice and assistance to developing countries in settling trade disputes etc. 	
	 NGOs: Candidates may consider a range of different pressure groups, charities and community action groups, and a variety of different policies, e.g. aid, debt relief, fair trade, microfinance 	
	 Criticisms of international institutions, e.g. of the IMF's Poverty Reduction Strategies, extent of debt relief offered Failure of the development agenda part of the WTO's Doha round Developing countries with small delegations still find it difficult to participate in the WTO Significance of individual NGOs' impact May such organisations be perpetuating low levels of development by enabling poor governments, and not forcing Africa to compete? To what extent do foreigners know what is best for developing countries - aren't the countries themselves best placed to know what the most urgent problems, and best solutions are? Problems of aid - the type of aid, tied aid, aid fatigue etc. 	
	NB Award a maximum of 12 marks (Level 4) if a candidate does not consider both international institutions and NGOs in their response.	(15)

Question Number		Mark
2(b)	Understanding of economic development	
2(b)	Possible factors could include: Primary product dependency Savings gap Inadequate capital accumulation Foreign currency gap Capital flight Rapid population growth Ageing population Debt Inadequate provision of credit and banking services Corruption Poor governance Absence of property rights Civil war Inadequate levels of human capital (poor education and/or healthcare) Evaluative comments could include: Prioritisation of factors	
	 Different factors affect different countries, at different times Some of the factors may also have a positive effect on a country, e.g. rapid population growth 	
	As development has different aspects, several of these factors may work in combination to constrain progress	
	NB Award a maximum of 20 marks (Level 4) if a candidate does not refer to a country or countries in their response.	(25)

Question Number		Mark
3(a)	 Understanding of a surplus on the current account of the balance of payments Low levels of consumer spending, perhaps due to high levels of 	
	 saving, leads to low value of imports Large deposits of a commodity, e.g. oil The use of protectionist policies by the country, e.g. subsidies to producers, tariffs applied to imports etc. High levels of price competitiveness, may be due to: a weak (or perhaps under-valued) exchange rate 	
	 low levels of inflation low relative unit labour costs High level of non-price competitiveness, may be due to: High levels of human capital High levels of capital investment / R&D spending 	
	 Evaluative comments could include: Distinction between reasons for a structural and a cyclical surplus (SR/LR causes) 	
	 Different countries tend to have different reasons for running a surplus (e.g. compare Saudi Arabia, China and Germany) Prioritisation of factors 	
	 WTO rules prevent protectionism to some extent Discussion of whether price or non-price competitiveness is the most important factor 	(15)

Question Number		Mark
3(b)	Candidates may approach the question in a variety of ways: a general approach; a consideration of the significance of trade deficits; or a consideration of the significance of trade surpluses.	
	Understanding of current account imbalances.	
	 A general approach: Danger of increased use of protectionist measures by countries with current account deficits WTO rules might prevent protectionism Financial inflows from surplus countries to western capital markets led to asset price bubbles and to financial institutions taking excessive risks (could count as two points) This could perhaps be countered by government regulation of markets Financial crisis led to deep falls in GDP of surplus countries who were heavily reliant on export-led growth 	
	World trade declined for a relatively short period of time	
	In the case of current account deficits, analysis could include: • Might indicate a lack of competitiveness • But might be desirable if it reflects a trade imbalance	
	 caused by imports of capital goods Might imply rising unemployment in manufacturing industries If labour is sufficiently mobile, this will be a SR problem only 	
	 Might be difficult to finance Inflows into the financial account have meant that this hasn't been a problem for e.g. USA and UK 	
	 Might cause a depreciation of the exchange rate, with possible inflationary consequences But this might bring about a correction of the deficit 	
	In the case of current account surplus, analysis could include: • Implies other countries have deficits, which might result in the adoption of protectionist measures by these countries • WTO rules might prevent protectionism	
	 Implies a lack of consumption within the country If a country isn't importing, it implies that it isn't allowing other countries to exploit their comparative advantages, preventing mutually beneficial trade The current account surplus could be a result of surplus balances in the investment income and international 	
	 transfers components, rather than the trade balance Might cause an appreciation of the exchange rate, reducing future price competitiveness - particularly a problem for developing countries seeking to diversify out of primary product production But this might bring about a correction of the surplus 	
	NB Award a maximum of 20 marks (Level 4) if a candidate does not refer to a country or countries in their response.	(25)

	Section A Part (a) Questions: Performance Criteria for Mark base 15			
Level 0	0	No rewardable material		
Level 1	1-3	 Displays knowledge presented as facts without awareness of other viewpoints Demonstrates limited understanding with little or no analysis Attempts at selecting and applying different economic ideas are unsuccessful Material presented is often irrelevant and lacks organisation. Frequent punctuation and/or grammar errors are likely to be present and the writing is generally unclear. 		
Level 2	4-6	 Displays elementary knowledge of well learnt economic facts showing a generalised understanding together with limited analysis i.e. identification of points or a very limited discussion Displays a limited ability to select and apply different economic ideas Material presented has a basic relevance but lacks organisation, but is generally comprehensible. Frequent punctuation and/or grammar errors are likely to be present which affects the clarity and coherence of the writing overall. 		
Level 3	7-9	 Displays knowledge and understanding of economic principles, concepts and theories as well as some analysis of issues i.e. answer might lack sufficient breadth and depth to be worthy of a higher mark Shows some ability to apply economic ideas and relate them to economic problems Employs different approaches to reach conclusions Material is presented with some relevance but there are likely to be passages which lack proper organisation. Punctuation and/or grammar errors are likely to be present which affect the clarity and coherence. 		
Level 4	10-12	 Displays a good knowledge of economic principles, concepts and theories together with an analysis of the issues involved Demonstrates an ability to select and apply economic ideas and to relate them to economic problems Evidence of some evaluation of alternative approaches leading to conclusions Material is presented in a generally relevant and logical way, but this may not be sustained throughout. Some punctuation and/or grammar errors may be found which cause some passages to lack clarity or coherence. 		
Level 5	13-15	 Displays a wide range of knowledge of economic principles, concepts and theories together with a rigorous analysis of issues Demonstrates an outstanding ability to select and apply economic ideas to economic problems Evaluation is well balanced and critical leading to valid conclusions Material is presented in a relevant and logical way. Some punctuation and/or grammar errors may be found, but the writing is clear and coherent overall. 		

	Section A Part (b) Questions: Performance Criteria for Mark base 25				
Level 0	0	No rewardable material			
Level 1	1-5	Displays knowledge presented as facts without awareness of other viewpoints			
		Demonstrates limited understanding with little or no analysis			
		 Attempts at selecting and applying different economic ideas are unsuccessful 			
		 Material presented is often irrelevant and lacks organisation. Frequent punctuation and/or grammar errors are likely to be present and the writing is generally unclear. 			
Level 2	6-10	Displays elementary knowledge of well learnt economic facts showing a generalised understanding together with limited analysis i.e. identification of points or a very limited discussion			
		 Displays a limited ability to select and apply different economic ideas Material presented has a basic relevance but lacks organisation, but is generally comprehensible. Frequent punctuation and/or grammar errors are likely to be present which affects the clarity and coherence of the writing overall. 			
Level 3	11-15	 Displays knowledge and understanding of economic principles, concepts and theories as well as some analysis of issues i.e. answer might lack sufficient breadth and depth to be worthy of a higher mark Shows some ability to apply economic ideas and relate them to economic problems 			
		 Employs different approaches to reach conclusions Material is presented with some relevance but there are likely to be passages which lack proper organisation. Punctuation and/or grammar errors are likely to be present which affect the clarity and coherence. 			
Level 4	16-20	 Displays a good knowledge of economic principles, concepts and theories together with an analysis of the issues involved Demonstrates an ability to select and apply economic ideas and to relate them to economic problems Evidence of some evaluation of alternative approaches leading to 			
		 conclusions Material is presented in a generally relevant and logical way, but this may not be sustained throughout. Some punctuation and/or grammar errors may be found which cause some passages to lack clarity or coherence. 			
Level 5	21-25	 Displays a wide range of knowledge of economic principles, concepts and theories together with a rigorous analysis of issues Demonstrates an outstanding ability to select and apply economic 			
		 ideas to economic problems Evaluation is well balanced and critical leading to valid conclusions Material is presented in a relevant and logical way. Some punctuation and/or grammar errors may be found, but the writing is clear and coherent overall.

Although the rise from 5% to 10% represents a doubling of the tax rate, it is still relatively low • The creation of inflationary pressures is not problematic, as inflation remains below target • Tax revenue may rise or fall (Laffer curve analysis) • If economic growth does not rise, investor confidence is unlikely to increase, meaning that inward FDI may not rise • Consumption has been the main engine of economic growth, so any reduction in this is likely to have significant effects on the economy • Effects of lower aggregate demand would depend on the level of spare capacity in the economy (extract implies this might be present), and the size of the multiplier Level Marks Descriptor 1 No evaluative comments.			result of the falling budget deficit	
1 1-3 Shows some awareness of the effects of the tax rise. Material presented is often irrelevant and lacks organisation. Frequent punctuation and/or grammar errors are likely to be present and the writing is generally unclear. 2 4-6 Understanding and explanation of the effects of the tax rise. Material is presented with some relevance but there are likely to be passages which lack proper organisation. Punctuation and/or grammar errors are likely to be present which affect the clarity and coherence. 3 7-8 Clear understanding and explanation of the effects of the tax rise with appropriate application to context. Material is presented in a relevant and logical way. Some punctuation and/or grammar errors may be found, but the writing is clear and coherent overall. Evaluation - Indicative content • The government's three strategies may prevent any fall in aggregate demand, meaning that economic growth, and hence unemployment are not affected • Significance: tax rise is being done in two stages. Although the rise from 5% to 10% represents a doubling of the tax rate, it is still relatively low • The creation of inflationary pressures is not problematic, as inflation remains below target • Tax revenue may rise or fall (Laffer curve analysis) • If economic growth does not rise, investor confidence is unlikely to increase, meaning that inward FDI may not rise • Consumption has been the main engine of economic growth, so any reduction in this is likely to have significant effects on the economy • Effects of lower aggregate demand would depend on the level of spare capacity in the economy (extract implies this might be present), and the size of the multiplier Level Marks Descriptor 0 0 No evaluative comments.	_		'

3	7-8	Clear understanding and explanation of the achievements of more policy with appropriate application to context. Material is presented in a relevant and logical way. Some punct and/or grammar errors may be found, but the writing is clear a coherent overall.	cuation

Evaluation - Indicative content					
	 Inflation rate is still only just above 1%, and has stayed constant most recently Foreign demand and business investment have not been the main contributors to rising aggregate demand most recently, implying some of the monetary policy transmission mechanisms may not be working Rising taxes may outweigh the incentive to increase consumption due to low interest rates Budget deficit appears to be rising still, and extract implies that expansionary fiscal policy is still required to ensure growth, even with the current ultra-loose monetary policy High level of capital expenditure among Japanese firms already more investment may not raise potential growth
