Chemistry Advanced Subsidiary Unit 2: Application of Core Principles of Chemistry			
Thursday 20 January 201 Time: 1 hour 30 minute			Paper Reference 6CH02/01

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.
- Questions labelled with an asterisk (*) are ones where the quality of your written communication will be assessed
 - you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.
- A Periodic Table is printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

SECTION A

Answer ALL the questions in this section. You should aim to spend no more than 20 minutes on this section. For each question, select one answer from A to D and put a cross in the box ⋈. If you change your mind, put a line through the box ⋈ and then mark your new answer with a cross ⋈.

- 1 The equation for the reaction between limewater and hydrochloric acid, including state symbols, is
 - \square A CaOH(s) + HCl(aq) \rightarrow CaCl(aq) + H₂O(l)

 - \square C CaOH(aq) + HCl(aq) \rightarrow CaCl(aq) + H₂O(aq)
 - \square **D** $Ca(OH)_2(aq) + 2HCl(aq) \rightarrow CaCl_2(aq) + 2H_2O(1)$

(Total for Question 1 = 1 mark)

- 2 As you go down Group 2 of the Periodic Table, which of the following decreases?
 - \square **A** The reactivity of the elements.
 - **B** The solubility of the hydroxides of the elements.
 - C The solubility of the sulfates of the elements.
 - **D** The thermal stability of the carbonates of the elements.

(Total for Question 2 = 1 mark)

- 3 Which concentrated acid would be best for mixing with a salt to carry out a flame test?
 - **A** Hydrochloric acid
 - **B** Nitric acid
 - C Phosphoric(V) acid
 - **D** Sulfuric acid

(Total for Question 3 = 1 mark)

- 4 The flame produced by a compound containing barium in a flame test is
 - **A** colourless.
 - **B** green.
 - C red.
 - **D** yellow.

(Total for Question 4 = 1 mark)

	` -	

8 Which of the following best defines the meaning of the term anthropogenic change?

It is a change caused by

- **A** nature.
- **B** plants.
- C animals.
- **D** humans.

(Total for Question 8 = 1 mark)

9 Which of the following equations represents the change when concentrated sulfuric acid is added to solid potassium chloride at room temperature?

- \square A 8KCl + 5H₂SO₄ \rightarrow 4K₂SO₄ + H₂S + 4Cl₂ + 4H₂O
- \blacksquare **B** 2KCl + 3H₂SO₄ \rightarrow 2KHSO₄ + SO₂ + Cl₂ + 2H₂O
- \square C 6KCl + 4H₂SO₄ \rightarrow 3K₂SO₄ + S + 3Cl₂ + 4H₂O
- \square **D** KCl + H₂SO₄ \rightarrow KHSO₄ + HCl

(Total for Question 9 = 1 mark)

10 The Maxwell-Boltzmann distribution of molecular energies is useful for explaining why increasing temperature affects the rate of a chemical reaction.

(a) Which of the following statements describes how the shape of the Maxwell-Boltzmann distribution curve changes as temperature increases?

(1)

- ☑ A The peak decreases in height and moves to the left.
- **B** The peak increases in height and moves to the left.
- C The peak decreases in height and moves to the right.
- **D** The peak increases in height and moves to the right.

(b) The main reason that reaction rates increase with temperature is that

(1)

- **A** all the molecules move faster.
- **B** all the molecules collide more frequently.
- C more molecules collide with the correct orientation.
- **D** a larger proportion of molecules have high energies.

(Total for Question 10 = 2 marks)

11 Four organic reactions are given below:

$$\mathbf{A} \qquad \text{CH}_3\text{CH}_3 \quad \rightarrow \text{CH}_2 = \text{CH}_2 + \text{H}_2$$

B
$$nCH_2 = CH_2 \rightarrow (-CH_2 - CH_2)_n$$

C
$$CH_2 = CH_2 + HBr \rightarrow CH_3CH_2Br$$

D
$$CH_3CH_2Br + H_2O \rightarrow CH_3CH_2OH + HBr$$

(a) Which reaction is a substitution reaction?

(1)

- \triangle A
- \square B
- \square C
- \bowtie D

(b) Which reaction is an electrophilic addition reaction?

(1)

- \mathbf{X} \mathbf{A}
- \boxtimes B
- \mathbf{X} C
- \boxtimes D

(c) Which reaction involves initial attack by a nucleophile?

(1)

- \mathbf{X} A
- \blacksquare B
- \mathbf{X} C
- \boxtimes D

(d) Which reaction requires an initiator?

(1)

- \mathbf{X} \mathbf{A}
- \boxtimes B
- \boxtimes C
- \boxtimes **D**

(Total for Question 11 = 4 marks)

- 12 Which of the following statements is true?
 - ☑ A CFCs and nitrogen monoxide, NO, are involved in the depletion of the ozone layer.
 - B CFCs act as catalysts for the depletion of the ozone layer, while nitrogen monoxide, NO, does not.
 - **C** CFCs and ozone are free radicals.
 - **D** CFCs and nitrogen monoxide, NO, are decomposed by UV radiation.

(Total for Question 12 = 1 mark)

TOTAL FOR SECTION A = 20 MARKS

SECTION B

Answer ALL the questions. Write your answers in the spaces provided.

- 13 This question is about iodine and its compounds.
 - (a) (i) The element iodine can be obtained from seaweed. One step in the procedure is to extract the iodine from aqueous solution by shaking with a hydrocarbon solvent in a separating funnel.

Draw a diagram of a separating funnel containing the separated layers. Label the hydrocarbon layer, and state its colour.

[Density of hydrocarbon layer 0.660 g cm⁻³]

(3)

Diagram

Colour of hydrocarbon layer

(ii) Iodine is also formed when an aqueous solution containing iodide ions reacts with an aqueous solution of iron(III) ions.

Write the ionic equation for this reaction. State symbols are **not** required.

(1)

(i)	Suggest why phosphoric(V) acid is used in this preparation rather than concentrated sulfuric acid.	(1)
(ii)	Describe what you would see if a test tube of hydrogen iodide gas was inverted in a beaker of water.	(1)
(iii)	When hydrogen iodide gas reacts with ammonia, dense white fumes form. Write the equation for this reaction, including state symbols.	(2)

(i)	Complete the following equation for the formation of 1-iodobutane.	
	$PI_3 + \dots C_4H_9OH \rightarrow$	(1)
ii)	Identify the intermolecular forces present between molecules of 1-iodobutane.	(1)
iii)	1-iodobutane reacts with hot aqueous silver nitrate solution. Describe what you would see when this reaction takes place.	1
	would see when this reaction takes place.	(1)
iv)	Give the structural formula for the organic product of the reaction between	(1)
iv)	- -	(1)
iv)	Give the structural formula for the organic product of the reaction between	

14 This question is about methanol, CH ₃ OH, and ethanol, CH ₃ CH ₂ OH.	
(a) (i) Draw a dot and cross diagram for methanol , showing outer electrons only.	(1)
(ii) Give the approximate values for the HCH and COH bond angles in methanol. Justify your answers.	(4)
HCH angle	
Justification	
COH angle	
Justification	
(iii) Using displayed formulae, draw a diagram to show a hydrogen bond between two methanol molecules. On your diagram, show the bond angle around the hydrogen atom of the hydrogen bond and give its value.	(2)

b) Met (i)	chanol reacts with sodium. State what you would observe in this reaction.	
		(2)
(ii)	Write the equation for this reaction. State symbols are not required.	(1)
c) Eth	anol can be used to make ethanal.	
(i)	Identify, by name or formula, the two chemicals you would use to make ethanal from ethanol in the laboratory.	(2)

(11)	Draw a diagram of the apparatus you would use to prepare ethanal from ethane in the laboratory and collect the product.	
		(2)
(iii)	Both ethanal and propane have a molar mass of 44 g mol ⁻¹ , but their boiling temperatures are different.	
	Suggest which substance has the higher boiling temperature. Justify your	
	answer by comparing the intermolecular forces in each compound.	
		(2)

	(Total for Question 14 = 16 m	arks)

15	The ingredients list on the label of a commercial indigestion remedy states that	it each
	tablet contains 680 mg of calcium carbonate.	

To check this, the following experiment was carried out.

One tablet was crushed. 50.0 cm³ of 1.00 mol dm⁻³ hydrochloric acid, an excess, was then added and the mixture was transferred to a volumetric flask. The volume was made up to exactly 100 cm³ with distilled water. 10.0 cm³ of this solution was titrated with 0.300 mol dm⁻³ sodium hydroxide solution. The following results were obtained.

Run	Rough	1	2
Final burette reading / cm ³	21.80	33.20	44.40
Initial burette reading / cm ³	10.00	21.80	33.20
Volume added / cm ³	11.80	11.40	11.20

(a) (i)	What should be used to crush the tablet?	

(ii) Name a suitable indicator for the titration. State the colour change you would expect to see.

- (2)
- (4)

(1)

Indicator				

(b) (i)	Select appropriate readings and calculate the mean titre.	
		(1)

(iv) Calculate the number of moles of hydrochloric acid left in 100 cm³ of solution. (1)

	TOTAL FOR SECTION B = 39 MA	DIZC
	(Total for Question 15 = 11 m	arks)
(viii)	Suggest a reason, other than experimental error, why your value differs from the value given on the label.	ne (1)
	[Assume that the molar mass of CaCO ₃ is 100 g mol ⁻¹]	(1)
(vii)	Calculate the mass of calcium carbonate in one tablet.	
		(1)
	Use this, and your answer to (v), to calculate the number of moles of calcium carbonate in one tablet.	
	is: $CaCO_3(s) + 2HCl(aq) \rightarrow CaCl_2(aq) + CO_2(g) + H_2O(l)$	
	The equation for the reaction between hydrochloric acid and calcium carbonate.	e
		(1)
	Use this and your answer to (iv) to calculate the number of moles of hydrochloric acid that reacted with the indigestion tablet.	(1)
	hydrochloric acid.	

SECTION C

Answer ALL the questions. Write your answers in the spaces provided.

16 This question is about some reactions which can be used in the manufacture of hydrogen.

Reaction 1 uses two naturally occurring chemicals, water and natural gas. Steam is reacted with methane to form carbon monoxide and hydrogen in an equilibrium reaction.

Reaction 1
$$CH_4(g) + H_2O(g) \rightleftharpoons CO(g) + 3H_2(g)$$

$$\Delta H = +210 \text{ kJ mol}^{-1}$$

In reaction 2, carbon monoxide and steam are passed over copper at high temperature. This forms carbon dioxide and hydrogen.

Reaction 2
$$CO(g) + H_2O(g) \rightleftharpoons CO_2(g) + H_2(g)$$

The carbon dioxide formed is removed by passing it through potassium carbonate solution in reaction 3.

Reaction 3
$$K_2CO_3(aq) + CO_2(g) + H_2O(l) \rightarrow 2KHCO_3(aq)$$

The potassium carbonate is regenerated by heating the potassium hydrogenearbonate solution in reaction 4. The carbon dioxide gas produced is released into the atmosphere.

Reaction 4
$$2KHCO_3(aq) \rightarrow K_2CO_3(aq) + CO_2(g) + H_2O(l)$$

(a) For each of the first three reactions, state the initial and final oxidation numbers of any elements that change their oxidation numbers. Hence decide which are redox reactions.

(5)

Reaction 1
Reaction 2
Reaction 3

(1)	Discuss, with reasons, the conditions of temperature and pressure that would favour the production of hydrogen in reaction 1 . You should consider the effect of the conditions on both yield and rate.				
	,	(7)			
(ii)	Excess steam is used in reaction 1 . State why an excess of a reagent is used				
	and suggest why steam, rather than methane, is chosen.				
		(2)			

ica	ction.	(2)
•••••
