Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.

Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.
- Questions labelled with an asterisk (*) are ones where the quality of your written communication will be assessed
 - you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.
- A Periodic Table is printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

P 4 2 9 7 8 A 0 1 2 8

Turn over ▶

SECTION A

Answer ALL the questions in this section. You should aim to spend no more than 20 minutes on this section. For each question, select one answer from A to D and put a cross in the box \boxtimes . If you change your mind, put a line through the box \boxtimes and then mark your new answer with a cross \boxtimes .

1 Name the compound below.

- ☑ A E-2-chloropent-2-ene
- **■ B** *Z*-2-chloropent-3-ene
- **C** *E*-2-chloropent-3-ene
- **☑ D** *Z*-2-chloropent-2-ene

(Total for Question 1 = 1 mark)

2 Which of the following compounds is **not** chiral?

- **■** B
- C HO OH
- HO O OH

(Total for Question 2 = 1 mark)

| 3 | Calculate the | pH of a solution | n of HCl, of cond | centration 0.25 mol dm ⁻³ | 3 |
|---|---------------|------------------|-------------------|--------------------------------------|---|
| _ | | p | | | |

- **A** -0.60
- **■ B** 0.25
- **C** 0.60
- **D** 1.39

(Total for Question 3 = 1 mark)

- 4 Which gas is the **least** suitable as a carrier gas in Gas-Liquid Chromatography?
 - A Argon
 - B Carbon dioxide
 - □ C Oxygen
 - ☑ D Nitrogen

(Total for Question 4 = 1 mark)

5 What are the units of the equilibrium constant (K_c) for the hypothetical reaction below?

$$2A(aq) + B(aq) \rightleftharpoons 4C(aq) + D(aq)$$

- B mol⁻² dm⁹
- C mol² dm⁻⁶

(Total for Question 5 = 1 mark)

6 This question is about the reversible reaction below.

$$2NO_2(g) \rightleftharpoons N_2O_4(g)$$

(a) A chemist investigating this reaction started with 10 moles of NO_2 and allowed the system to reach equilibrium. If 3 moles of N_2O_4 are formed, the number of moles of NO_2 at equilibrium is

(1)

- **⋈ A** 8.5
- **⋈ B** 7
- **C** 6
- □ D 4
- (b) Under different conditions, 40% of the moles present at equilibrium is N_2O_4 . If the total pressure of the system is 2.0 atm, the numerical value of the equilibrium constant, K_p is

(1)

- **A** 0.56
- **B** 0.67
- **C** 1.5
- ☑ D 1.8

(Total for Question 6 = 2 marks)

7 Carbon monoxide and chlorine react together and reach equilibrium:

$$CO(g) + Cl_2(g) \rightleftharpoons COCl_2(g)$$

If the pressure of the system is then **increased** at constant temperature, which of the following statements is correct?

- \square **A** The equilibrium moves to the left and K_p decreases.
- \square **B** The equilibrium moves to the right and K_p increases.
- \square **C** The equilibrium moves to the right, then back to the left and K_p remains the same.
- \square **D** The equilibrium moves to the right and K_p remains the same.

(Total for Question 7 = 1 mark)

8 The table shows some data about metal ions, non-metal ions and their compounds.

| lon | Enthalpy change of hydration / kJ mol ⁻¹ | Compound | Lattice energy / kJ mol ⁻¹ |
|----------------------|---|-----------------------|--|
| Mg ²⁺ (g) | -1921 | MaCL (c) | 2526 |
| Cl⁻(g) | -340 | MgCl ₂ (s) | -2526 |
| Cs+(g) | -276 | CoF(c) | 747 |
| F-(g) | -483 | CsF(s) | _747 |

Use the data to calculate

(a) the standard enthalpy change, in kJ mol⁻¹, for the following process.

$$Mg^{2+}(g) + 2Cl^{-}(g) \rightarrow Mg^{2+}(aq) + 2Cl^{-}(aq)$$

(1)

- **A** -1241
- **B** -1581
- **◯ C** −2261
- **D** -2601

(d) A student carried out a similar investigation into the kinetics of the reaction between 2-bromomethylpropane and hydroxide ions. A summary of the student's findings is shown below.

<u>Kinetics Investigation - Summary of Key Findings</u>

Reaction is first order with respect to 2-bromomethylpropane

Suggested Mechanism

 $S_N 2$ - as two steps in process

$$\begin{array}{c|c} CH_3 & CH_3 \\ \hline & Step 1 \\ \hline & CH_3 \\ \hline & CH_3 \\ \hline & CH_3 \\ \hline & CH_3 \\ \hline \end{array} + Br$$

$$H_3C$$
 CH_3
 $C+$
 CH_3
 CH_3

Use your knowledge of the mechanism of nucleophilic substitution reactions to suggest one feature of the summary, including the student's mechanism, that you agree with and two features you think are incorrect.

(3)

One feature you agree with.

Two features you think are incorrect.

(Total for Question 14 = 18 marks)

15 Aspirin can be manufactured from sodium phenoxide using the process shown below.

ONa
$$+ CO_2$$
 (g) Step 1 $+ CO_2$ (g) Step 1 $+ COONa_{(s)}$ COONa $+ COONa_{(s)}$ Sodium phenoxide Step 3

Overall yield for process = 79%

Aspirin

(a) Explain **one** effect of an increase in pressure on the reaction in Step 1.

(2)

(b) The overall yield for this process is 79%.

Calculate the mass, in tonnes, of aspirin that would be formed from 2.5 tonnes of sodium phenoxide. Give your answer to **two** significant figures.

[Molar masses / g mol^{-1} : sodium phenoxide = 116; aspirin = 180]

(3)

(c) Classify the reaction type in Step 3 and suggest a suitable reagent.

(2)

Reaction type

Reagent

| 10 | 116211 | conce | 12 1110 | aue D | y adding | HOL | water to | ground | conee | neall? |

Chemists at the University of Nevada have produced bio-diesel fuel from used coffee grounds. The grounds contain approximately 10–15% oil by mass. This oil can be extracted, using standard chemical techniques, and then converted to bio-diesel by the reaction with methanol in the presence of a suitable catalyst.

(a) (i) A solvent is added to the solid coffee grounds to dissolve the oil. Suggest how the oil is then obtained from this mixture.

(2)

(ii) Complete the equation below for the formation of a bio-diesel from the reaction of an oil with methanol.

(2)

(iii) Suggest a suitable catalyst for the reaction in (a)(ii).

(1)

22

| *(b) Another source of oil for bio-diesel production is palm oil, obtained from the fruit of palm trees grown on large plantations across many tropical regions. | |
|---|------|
| Consider one advantage and one disadvantage of each source to decide which oil may provide a potentially greener and more sustainable supply of bio-diesel. | (4) |
| | |

| (Total for Question 16 = 9 ma | rks) |

TOTAL FOR SECTION B = 48 MARKS

SECTION C

Answer ALL the questions. Write your answers in the spaces provided.

17 Adipic acid, HOOC(CH₂)₄COOH, is a dicarboxylic acid used in the production of polymers. It can be made by the reaction of buta-1,3-diene with carbon monoxide and water.

$$CH_2CHCHCH_2(g) + 2CO(g) + 2H_2O(I) \rightarrow HOOC(CH_2)_4COOH(s)$$

(a) (i) Use the Data Booklet to complete the table below.

(2)

| | CH ₂ CHCHCH ₂ (g) | CO(g) | H ₂ O(I) | HOOC(CH ₂) ₄ COOH(s) |
|--|---|-------|---------------------|---|
| $\Delta H_{\mathrm{f}}^{\ominus}$ / kJ mol ⁻¹ | +109.9 | | | -994.3 |
| S [⊕] / J mol ⁻¹ K ⁻¹ | 278.7 | | | 250.0 |

(ii) Use data from the table to calculate the standard enthalpy change, in kJ mol⁻¹, when adipic acid is formed from buta-1,3-diene, carbon monoxide and water.

(2)

(iii) Use data from the table to calculate the standard entropy change of the system, in J mol⁻¹ K⁻¹, when adipic acid is formed from buta-1,3-diene, carbon monoxide and water.

(2)

| (iv) Use your answers to (a)(ii) and (a)(iii) to calculate $\Delta S_{\rm surroundings}$ and $\Delta S_{\rm total}$ for the reaction at 298 K. | (3) |
|--|-----|
| (v) It was suggested that decreasing the temperature of the reaction to less than 298 K would produce a greater yield of adipic acid. Explain, in terms of the effect on $\Delta S_{\rm system}$, $\Delta S_{\rm surroundings}$ and hence $\Delta S_{\rm total}$, whether this would be the case. | (3) |
| | |
| (b) Infrared spectroscopy can be used to follow the progress of reactions. During the reaction to produce adipic acid, suggest one peak which diminishes and one peak which appears. Use information from the Data Booklet to identify two such possible peaks, giving their wave numbers and the bonds involved. | (2) |
| | |

| (c) | Adipic acid is used as an additive in some fruit jellies. Suggest what effect the | |
|-----|---|-----|
| | adipic acid will have on the flavour of the jelly. | |
| | | (1) |
| | | |

(d) An organic compound, **Q**, is found to contain 49.3% carbon and 6.8% hydrogen by mass.

(i) Use these data to confirm its empirical formula is $C_3H_5O_2$.

(3)

(ii) The structure of **Q** is shown below.

The table below summarises some information about parts of the nmr spectrum of compound ${\bf Q}$.

Use the Data Booklet, and your knowledge of splitting patterns, to complete the table with respect to the features of compound **Q** shown in bold.

(4)

| Feature of compound Q | Chemical shift / ppm | Splitting pattern |
|------------------------------|-------------------------|-------------------|
| CH ₃ | 0.1 – 1.9 | |
| CH ₂ | | |
| СООН | | singlet |
