Pure Mathematics P4			
You must have: Mathematical Formulae and Statistica	al Tables (Ye	Total Marks	

Candidates may use any calculator permitted by Pearson regulations.

Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

## Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer all questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
  - there may be more space than you need.
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Inexact answers should be given to three significant figures unless otherwise stated.

## Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 9 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
- use this as a guide as to how much time to spend on each question.

## Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

**(3)** 

1.  $f(x) = \frac{5x + 10}{(1 - x)(2 + 3x)}$ 

- (a) Write f (x) in partial fraction form.
- (b) (i) Hence find, in ascending powers of x up to and including the terms in  $x^2$ , the
- binomial series expansion of f(x). Give each coefficient as a simplified fraction. (5)
  - (ii) Find the range of values of x for which this expansion is valid. (1)

Question 1 continued	
	(Total for Question 1 is 9 marks)

2. A set of points P(x, y) is defined by the parametric equations

$$x = \frac{t-1}{2t+1} \qquad y = \frac{6}{2t+1} \qquad t \neq -\frac{1}{2}$$

(a) Show that all points P(x, y) lie on a straight line.

**(4)** 

(b) Hence or otherwise, find the x coordinate of the point of intersection of this line and the line with equation y = x + 12

**(2)** 

DO NOT WRITE IN THIS AREA

Question 2 continued	
(Total fo	r Question 2 is 6 marks)

**3.** 

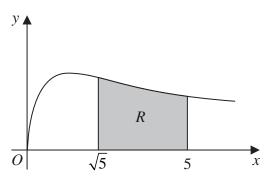

Figure 1

In this question you must show all stages of your working.

Solutions relying entirely on calculator technology are not acceptable.

Figure 1 shows a sketch of the curve with equation

$$y = \sqrt{\frac{3x}{3x^2 + 5}} \qquad x \geqslant 0$$

The finite region R, shown shaded in Figure 1, is bounded by the curve, the x-axis and the lines with equations  $x = \sqrt{5}$  and x = 5

The region *R* is rotated through  $360^{\circ}$  about the *x*-axis.

Use integration to find the exact volume of the solid generated. Give your answer in the form  $a \ln b$ , where a is an irrational number and b is a prime number.

Question 3 continued	
(Total for Question	n 3 is 5 marks)

**4.** (a) Using the substitution  $u = \sqrt{2x+1}$ , show that

$$\int_{4}^{12} \sqrt{8x+4} \, e^{\sqrt{2x+1}} \, dx$$

may be expressed in the form

$$\int_{a}^{b} ku^{2} e^{u} du$$

where a, b and k are constants to be found.

**(4)** 

(b) Hence find, by algebraic integration, the exact value of

$$\int_{4}^{12} \sqrt{8x + 4} \, e^{\sqrt{2x+1}} \, dx$$

giving your answer in simplest form.

(Total for Q	uestion 4 is 9 marks)

5.

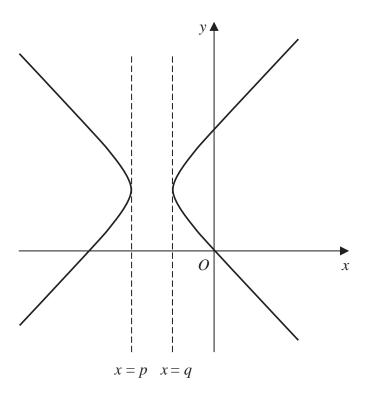

Figure 2

Figure 2 shows a sketch of the curve with equation

$$y^2 = 2x^2 + 15x + 10y$$

(a) Find  $\frac{dy}{dx}$  in terms of x and y.

**(4)** 

The curve is not defined for values of x in the interval (p, q), as shown in Figure 2.

(b) Using your answer to part (a) or otherwise, find the value of p and the value of q.

(Solutions relying entirely on calculator technology are not acceptable.)

	(Total for Question 5 is 7 marks)

- **6.** Relative to a fixed origin *O*.
  - the point A has position vector  $2\mathbf{i} 3\mathbf{j} + 5\mathbf{k}$
  - the point *B* has position vector  $8\mathbf{i} + 3\mathbf{j} 7\mathbf{k}$

The line l passes through A and B.

- (a) (i) Find  $\overrightarrow{AB}$ 
  - (ii) Find a vector equation for the line l

**(3)** 

The point C has position vector  $3\mathbf{i} + 5\mathbf{j} + 2\mathbf{k}$ 

The point P lies on l

Given that  $\overrightarrow{CP}$  is perpendicular to l

(b) find the position vector of the point P

Question 6 continued	
(Total for	Question 6 is 8 marks)

7. The volume  $V \text{cm}^3$  of a spherical balloon with radius r cm is given by the formula

$$V = \frac{4}{3} \pi r^3$$

(a) Find  $\frac{dV}{dr}$  giving your answer in simplest form.

**(1)** 

At time t seconds, the volume of the balloon is increasing according to the differential equation

$$\frac{\mathrm{d}V}{\mathrm{d}t} = \frac{900}{\left(2t+3\right)^2} \qquad t \geqslant 0$$

Given that V = 0 when t = 0

(b) (i) solve this differential equation to show that

$$V = \frac{300t}{2t + 3}$$

(ii) Hence find the upper limit to the volume of the balloon.

**(5)** 

(c) Find the radius of the balloon at t = 3, giving your answer in cm to 3 significant figures.

**(3)** 

(d) Find the rate of increase of the radius of the balloon at t = 3, giving your answer to 2 significant figures. Show your working and state the units of your answer.

8.

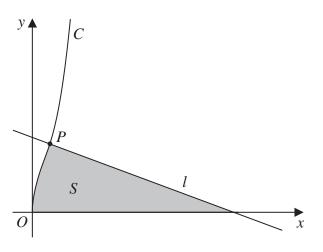

Figure 3

In this question you must show all stages of your working.

Solutions relying entirely on calculator technology are not acceptable.

A curve C has parametric equations

$$x = \sin^2 t \qquad \qquad y = 2 \tan t \qquad \qquad 0 \leqslant t < \frac{\pi}{2}$$

The point *P* with parameter  $t = \frac{\pi}{4}$  lies on *C*.

The line l is the normal to C at P, as shown in Figure 3.

(a) Show, using calculus, that an equation for l is

$$8y + 2x = 17 (5)$$

The region S, shown shaded in Figure 3, is bounded by C, l and the x-axis.

(b) Find, using calculus, the exact area of S.

(Total for Question o is 11 marks)	

**9.** A student was asked to prove, for  $p \in \mathbb{N}$ , that

"if  $p^3$  is a multiple of 3, then p must be a multiple of 3"

The start of the student's proof by contradiction is shown in the box below.

Assumption:

There exists a number  $p, p \in \mathbb{N}$ , such that  $p^3$  is a multiple of 3, and p is NOT a multiple of 3

Let 
$$p = 3k + 1, k \in \mathbb{N}$$
.

Consider 
$$p^3 = (3k+1)^3 = 27k^3 + 27k^2 + 9k + 1$$
  
=  $3(9k^3 + 9k^2 + 3k) + 1$  which is not a multiple of 3

(a) Show the calculations and statements that are required to complete the proof.

**(3)** 

(b) Hence prove, by contradiction, that  $\sqrt[3]{3}$  is an irrational number.

**(5)**
